

Competence Center Energy and Mobility (CCEM)

The Competence Center Energy and Mobility contributes to the development of a more sustainable energy system.

Research focuses on the efficient provision of energy services, efficient and “zero-emission” energy conversion and on the substitution of fossil energy carriers by low-CO₂ primary energies. CCEM-CH contributes to the lowering of CO₂-emissions, increasing security of supply, decelerating the depletion of non-renewable resources, and reducing dependence on imported fossil energy carriers.

ABOUT CCEM [1]

- [5] : <http://www.novatlantis.ch>

novatlantis [4]

Novatlantis takes the findings and results of recent research within the ETH domain and applies them to projects designed to promote sustainable development in major urban settlements.
